MORE LINUX UTILITIES

GREP

- Search file for a string
- Example: `grep word filename`
- Matches any occurence, to search for whole words:

  `grep -w word filename`
- Options:
  - `-i`: ignore case
  - `-r`: recursive

WILDCARDS

- Expand filename to any matching pattern
- Wildcards:
    - `*`: any number of any characters
    - `?`: any single character
    - `[]`: character class or range (includes `[[:upper:]]`, ...
    - `!`: can be used to specify complement
- More details: `man 7 glob` (on linux)
- globbing: pathname expansion
- commands only see list of matching filenames
